EDUCATION

UX Research & Design - Master's degree 2023 – 2026
University of Economics and Business, Prague (VŠE)

Digital Marketing - Bachelor's degree 2020 – 2023
Newton University, Prague

Technical Lyceum 2016 – 2020
Secondary Technical School of Electrical Engineering, Olomouc

WORK EXPERIENCE

Finshape June 2025 – June 2026
Low code FE development

Finshape is a great company! Towards the end of my studies, I became somewhat overwhelmed with writing my thesis. I ended up extending my studies by another year, which gave me the perfect excuse to do something practical alongside it. I joined Finshape, where I worked on online banking applications using the company's internal low-code tool for frontend development. The low-code team was young, supportive, and genuinely a joy to work with.

My typical day was a healthy mix of detective work and UI development:

- **Decoding requirements:** Reading specs in Confluence, digging through Figma files, and pinging analysts, designers, and backend devs with tons of questions to clarify details and edge cases.
- **Component crafting:** Building responsive banking screens and UI components using the internal react based low-code engine.
- **Git battle royale:** Trying to merge my code before everyone else to avoid painful merge conflicts (spoiler: I lost that race more often than I'd like to admit, which at least gave me plenty of practice resolving merge conflicts).
- **Delivery & collaboration:** Our routine included daily frontend syncs to divide tasks and unblock each other, plus twice-weekly cross-functional standups with the broader project team to report status, provide time estimates, and align on dependencies.

SKILLS

Design & Prototyping

- **Figma** – design systems, prototyping, components, variants
- **Adobe Illustrator** – basic vector graphics
- **Condens** – user research synthesis, notes & tagging

Product & Analysis

- **Understanding the problem** – asking how the work is actually done and where it gets stuck
- **Requirements & rules** – turning a vague request into a clear spec, asking "what happens when..."
- **Solution evaluation** – comparing existing tools vs. a custom build on cost and fit

Web & Code

- **AI-assisted development** – building small web apps with AI agents (Antigravity) from a detailed spec, testing the result scenario by scenario
- **HTML/CSS & JavaScript** – layouts, basic interactivity, DOM, Web Audio API, complex tasks such as centering a div 😜
- **Supabase** – used as the backend for Timi; understand the basics of tables, relations and permissions
- **Rive** – interactive UI and animations
- **WordPress** – custom post types, custom fields, dynamic content
- **Git** – everyday team workflow, merge conflicts included

Languages

- **Czech** – native
- **English** – B2 (non-certified), used in everyday communication and study materials
